

Patnam Sai | AI Developer

Email Id: patnam.sai@cognizant.com

Phone Number: 7569317830

Experience: 1 Year(Cognizant Technology Solutions)

Education

- B.Tech in CSE, Madanapalli Institute of Technology and Science

Technology Stack

• **Frameworks:** LangChain, LangGraph, AutoGen, MCP, FastAPI, MongoDB, SQL, RAG.

• **Area of Expertise:** Generative AI, Agentic AI, Prompt Engineering, LLM Fine-Tuning, Python, Backend Development, Java.

Experience Summary

Experienced AI Developer specializing in building production-grade agentic systems, LLM integration, and AI-powered security automation. Proficient in Backend Development, NLP knowledge, Prompt Engineering, RAG, Agentic AI and multi-agent orchestration with hands-on expertise in deploying scalable REST APIs and autonomous AI pipelines.

Projects Undertaken

AI Multi-Agent Automation System

- Built a Test Case Agent using Python, LangGraph and LLama 14B model that takes user stories, fetches functional requirements from a collection, and generates test cases for each story.
- Designed a multi-agent system using Python and LangGraph, enabling agents to work together and handle tasks independently.
- Integrated agents with MongoDB ensuring smooth data exchange and organized communication between the system and the database.
- Implemented an A2A (Agent-to-Agent) setup and exposed agent functionality through API endpoints, allowing external triggers to activate and interact with agents.
- Built reliable REST APIs using Python FastAPI so external applications and services can easily call and use agent capabilities.

AI-Powered RAG Chat Assistant

- Built an AI-powered Chat Assistant using AutoGen, FastAPI and Amazon Bedrock (Claude Opus) that responds to user queries with summarized answers and relevant source links.
- Implemented a RAG pipeline using Nomic Embed Text model to ingest and embed ~50 private organizational documents, enabling context-aware retrieval.
- Designed the agent to intelligently fetch relevant document chunks and generate precise, context-grounded responses for organizational queries.
- Developed a Streamlit interface for testing and validating assistant interactions end-to-end.
